New Photorejuvenation Protocol (IPL +ALA)

Many of my patients have experienced the benefits of photorejuvenation since I introduced the treatment in 2000. Well, it just got better!

Research indicates that the use of Aminolevulinic Acid (ALA) in addition to intense pulse light (IPL), can reverse sun damage and pre-cancerous changes on the skin. ALA is a very effective photoactivating agent allowing deeper penetration of the light. In the series of six treatment sessions, the new protocol adds ALA to the third and fourth sessions. ALA is applied to the skin for 15 minutes. There is a tingling sensation with no burning or

discomfort. After 15 minutes, the intense pulse light is applied to the skin to activate the ALA. Following the treatment with ALA, you may experience some redness for a few days which is controlled with a topical steroid. The benefits of this small amount of downtime is far outweighed by the increased

"I cannot stress enough that it is my strong contention that these procedures should only be administered in a medical setting by medical professionals."

-Dr. Patrick Felice

Photorejuvenation for Facial Skin Imperfections

benefits of it's use. Call now for further information on photorejuvenation +ALA and schedule your series now.

Remember also, that Botox and wrinkle fillers can enhance the overall effect of the photorejuvenation series creating a completely refreshed appearance.

Skinmedica Introduces New Products

In an ongoing march to be the best skin care product line in the industry, Skinmedica has released additional products that we are very pleased with.

TNS Illuminating Eye Cream: Combines the benefits of Nouricel-MD with the newest peptide technologies to help minimize the appearance of lines and wrinkles while toning the eye area. It reduces the appearance of dark circles around the eyes and results in immediate brightening. This elegant formulation complements the use of TNS Recovery Complex.

TNS Body Mist with NouriCel-MD: A convenient

spray formulation that offers the benefits of botanical skin brighteners to rejuvenate aging and sun-damaged skin. Designed to enhance skin prone to unwanted sun exposure, TNS Body Mist improves skin elasticity and decreases the appearance of age spots and blotchiness on the neck, chest, arms and back of hands.

Ceratopic Ceramide Replenishing Treatment: Ceratopic is a highly emollient, non-greasy lotion that relieves dry, itchy, irritated skin, and is specially formulated and clinically proven to rebuild the skin's natural barrier function.

Referral Reward Program

You know our practice continues to grow through your positive referrals to others. We want to thank everyone who has generously shared their "beauty secrets" with their friends, neighbors and colleagues.

Right now, we'd like to thank all our valued patients for their referrals.

Enclosed are more Referral Reward Program Flyers. Thanks so much for thinking of our practice.

Silicone Breast Implants

Recently, the FDA held hearings to determine the return of Silicone Breast Implants. Primarily, two manufacturers of the implants presented data to the FDA. The FDA ruled that Mentor Corporation's silicone implants had sufficient safety data to be recommended for further evaluation and vote for approval. This is the only information available thus far and does not guarantee a return to the market.

Put Yourself, Your Family and Your Friends First!!!

You want the highest quality in all you do. No imitations. We feel the same way at Youthful Images. For the following reasons, we feel we offer the highest quality.

*Over 7400 cosmetic surgical procedures, with the majority performed in our state of the art AAAASF accredited office surgical

facility under sedation anesthesia, not general anesthesia. Outstanding safety record.

*Over 15,200 non-surgical procedures (microdermabrasion, photorejuvenation, laser hair removal, spider vein treatments, botox, wrinkle fillers, acne photoclearing).

*Pioneers in Laser Therapy. First to offer laser resurfacing, laser hair removal, photorejuvenation and acne photoclearing in the State of Connecticut.

*Exceptional staff, with the highest professional credentials.

String Lifts????

By now, I am sure many of you have seen on television or read in magazines the amazing new "weekend facelift". The authors tout the procedure as "minimally invasive" with little to no downtime. They say that the procedure can be done under a local anesthetic. You may see it referenced as "The Feather Lift" or the "String Lift". However it is marketed, I want my patients to understand what the procedure can and can't accomplish. The procedure is accomplished by using a local anesthetic to anesthetize various parts of the face to be treated. Long needles are then passed under the skin to place a series of suture materials. These are then tightened to pull the face up in places where it is sagging. The procedure is limited to those who have very early laxity of the skin as there is no removal of excess skin involved.

My personal take on the procedure is that the results will not be long lasting and does not justify the expense. A similar procedure can be accomplished in the hands of a qualified Plastic Surgeon called the "Mini-facelift" with similar downtime but longer lasting results.

Please feel free to schedule an appointment to evaluate your individual needs.

Enhancing Hair Removal

As a pioneer in the field of laser hair removal, I am always on the lookout for anything that can enhance the results. I believe the product "Vaniqa" meets those criteria. While it would be great to have some magical cream that eliminates hair forever, Vaniqa can be used in conjunction with laser hair removal to decrease hair growth in between sessions and also, decrease the incidence of hair growth breakthrough. Vaniqa is by prescription only. Call to inquire about laser hair removal, or if you have already started the process, we will call in a prescription for you.
